Cognitive Brain Therapy with RehaCom

During all rehabilitation phases persons need a specific and target-oriented cognitive therapy according to their personal needs. RehaCom offers several individual solutions for brain therapy at the computer. Many various therapy modules are available for an easy use in the following cognitive fields:

Attention • Alertness • Responsiveness • Neglect
Memory • Executive Functions • Visual Field

Scientifically Proven Effectiveness

RehaCom has been developed by well-known experts and therapists in Germany and provides more than 25 years of experience. It is an evidence-based and clinically tested part of cognitive rehabilitation. Scientific studies have already shown the positive results and therapeutic efficiency which mostly refer to the following client groups:

Stroke • Traumatic Brain Injury (TBI) • Mental Health
(Psychiatry) • Multiple Sclerosis (MS) • Geriatrics •
ADHD / Pediatrics

Ergonomic RehaCom Panel

A conventional PC keyboard is sometimes inappropriate as an input device for computer-based therapies. Therefore, RehaCom offers a special keyboard to allow clients with severe motor impairments to use the PC.
